

Product Name: Atlas CRM Version: 5.2.0 Release

Date: 24 April 2026

Overview

Atlas CRM 5.2.0 introduces performance enhancements, usability improvements, and several new features requested by enterprise customers. This release focuses on streamlining workflow automation, improving reporting capabilities, and strengthening security compliance.

New Features

- Workflow Automation Builder: A new drag-and-drop interface for creating automated workflows. - Advanced Reporting Dashboard: Customisable widgets with real-time data updates. - Multi-Factor Authentication (MFA): Added support for authenticator apps. - API Rate Limiting Controls: Admins can now define thresholds per user role.

Improvements

- Improved load times for large datasets (up to 35% faster). - Enhanced search functionality with predictive suggestions. - Updated UI for contact management screens. - Optimised database queries for reporting modules.

Bug Fixes

- Fixed issue where email notifications failed under high load. - Resolved data sync delay with third-party integrations. - Corrected UI misalignment in dashboard widgets. - Fixed crash when exporting reports with special characters.

Security Updates

- Patched vulnerability in authentication token handling. - Improved encryption for stored credentials. - Updated dependencies to latest secure versions.

Known Issues

- Minor delay when loading dashboards with more than 50 widgets. - Occasional timeout when connecting to legacy API endpoints. - Mobile app notifications may be delayed on older devices.

System Requirements

- Minimum: Windows 10 / macOS 11, 8GB RAM, 500MB disk space. - Recommended: Windows 11 / macOS 13, 16GB RAM, SSD storage. - Browser: Latest versions of Chrome, Edge, or Safari.

Upgrade Notes

- Backup your database before upgrading. - Ensure all plugins are compatible with version 5.2.0. - Run the migration script included in the installation package. - Downtime of approximately 15–30 minutes is expected.

Deprecations

- Legacy reporting module will be removed in version 6.0. - Support for API v1 endpoints will end in Q4 2026.
